TITLE : POLYAMIDE FILM

ABSTRACT : PURPOSE: To prepare a polyamide film excellent in both the transparency and slip properties by forming a compsn., obtd. by adding a specific polyamide and a bismaleimide compd. to a polyamide mainly comprising capramide units into a film by a water-cooled inflation method.

CONSTITUTION: A film is formed by a water-cooled inflation method from a resin compsn. obtd. by compounding 100 pts.wt. polyamide (A) having an m.p. higher than 215°C and mainly comprising capramide units with a polyamide (B) having the repeating units of the formula (wherein n is 9, 10, or 11) and a bismaleimide compd. If necessary, 0.01-0.5 pts.wt. inorg. filler may be added to the resin compsn. As said polyamide A, nylon 6 and nylon 6/66 are listed. Nylon 10 and nylon 11 are the examples of the polyamide B. Talc. kaolin, baked kaolin, and silica are pref. fillers because they are easily dispersed.
